EXPERIENCE

Fortinet

Software Engineer

Feb 2025 – Jun 2026

Sunnyvale, CA

- Contributed as a backend and frontend engineer for FortiCNAPP/Lacework's Agent and data aggregation pipelines
- Collaborated on a product-wide migration to move off Snowflake DB to an in-house data lake store using Java SparkSQL and GraphQL to significantly cut operational costs
- Designed and shipped a modernized version of the FortiCNAPP Agent Fleet dashboard UI with React
- Built out Agent system metrics to export of cgroup resource stats on the Agent process to provide meaningful context to customers on the Agent's resource utilization
- Enhanced Agent release internal tooling written in Bash and Rust to improve autoupgrade functionality and to prevent delays deploying a new version
- Diagnosed and resolved customer-facing issues using Elasticsearch, Teleport, and K8s

Scioly.org

Administrator

Feb 2024 – Current

<https://scioly.org>

- Oversees site infrastructure for Scioly.org, a community-based Science Olympiad organization run by volunteer staff
- Revamping our test exchange service to accomodate for a user-friendly experience using Typescript, Next.js, MySQL, and S3 while also maintaining compatibility with our existing PHP and MySQL backend
- Overhauled the exclusively LAMP stack architecture by using Docker Swarm to allow for seamless deployments and rollbacks
- Mitigated aggressive bot scrapers by implementing client-side challenges into our route pipeline, saving the site from resource starvation and increasing responsiveness of the site
- Configured in Prometheus and Grafana to allow for live metrics for deeper understanding of resource issues
- Designed and implemented a robust backup plan across all production environments using BorgBackup, LVM, and Bash for live daily backups with zero downtime
- Regularly conduct monthly meetings with the rest of staff team

HümEIQ

Full Stack Engineer

Jun 2023 – Feb 2025

Schaumburg, IL

- Rapidly developed a customizable course hosting platform using TypeScript, Next.js 14, tRPC, and PostgreSQL within 10 weeks, enabling the company to develop asynchronous online course materials
- Optimizes server performance by using static content generation wherever possible
- Conducts weekly meetings with the CEO on any new features added and for QA feedback, ensuring a great user experience when creating new course content and taking courses
- Maintains production deployments, infrastructure, and course material using Vercel, NeonDB, AWS S3, and Wistia

EDUCATION

University of Illinois: Urbana-Champaign

B.S. in Computer Science

Aug 2019 – May 2023
